

01

Proof by metric

The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**. Repeated reconciliations become **zero-loss**. Data re-keyed in every system is **eliminated**. *Together, at least 30% of daily operational load, structurally removed.*

The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**.
Repeated reconciliations become **zero-loss**.
Data re-keyed in every system is **eliminated**.
Together: at least **30%** of daily operational load, structurally removed.

The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**. Repeated reconciliations become **zero-loss**. Data re-keyed in every system is **eliminated**.

At least 30% of daily operational load, structurally removed.

30%

01 The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**.
Repeated reconciliations become **zero-loss**. Data
re-keyed in every system is **eliminated**.

The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**.

Repeated reconciliations become **zero-loss**. Data
re-keyed in every system is **eliminated**.

$\geq 30\%$

of daily operational load, structurally removed.

The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**.

Repeated reconciliations become **zero-loss**. Data re-keyed in every system is **eliminated**.

The baseline: at least **30%** of daily operational load, structurally removed.

Eighteen hours of lag becomes **sub-second**.
Repeated reconciliations become **zero-loss**. Data
re-keyed in every system is **eliminated**.

$\geq 30\%$ of daily operational load, structurally removed.

THE 30% EFFICIENCY BASELINE

Eighteen hours of lag becomes **sub-second**.
Repeated reconciliations become **zero-loss**.
Data re-keyed in every system is **eliminated**.

— $\geq 30\%$ —

of daily operational load, structurally removed.

01 The 30% efficiency baseline

Eighteen hours of lag becomes **sub-second**.
Repeated reconciliations become **zero-loss**. Data re-keyed in every system is **eliminated**.

$\geq 30\%$

of daily operational load, structurally removed.

Every system we build is specified against one baseline: a structural reduction of at least 30% in daily operational load.

The 30% efficiency baseline

Eighteen hours of lag becomes
sub-second. Repeated reconciliations
become zero-loss. Data re-keyed in every
system is eliminated.

01 Proof by metric

$\geq 30\%$

of daily operational load,
structurally removed.

Every system we build is specified against
one baseline: a structural reduction of at
least 30% in daily operational load.
