

Stated plainly, so it can be checked.

<i>Data location</i>	Client-controlled infrastructure.
<i>Access</i>	Role-based. Permissions are explicit and reviewable.
<i>History</i>	An append-only record of changes and actions.
<i>Agents</i>	Bounded permissions, approval gates, a full action log, and every action reversible.
<i>Network</i>	Outbound access denied by default.
<i>Failure</i>	Offline-capable nodes and deterministic recovery.

Stated plainly, so it can be checked.

We do not claim certifications on this page. If you must meet a specific regulation, we design to it and show you how.

- ✓ Your data stays on client-controlled infrastructure.
- ✓ Access is role-based; permissions are explicit and reviewable.
- ✓ History is an append-only record of changes and actions.
- ✓ Agents run with bounded permissions, approval gates and a full action log. Every action is reversible.
- ✓ Outbound network access is denied by default.
- ✓ Failures meet offline-capable nodes and deterministic recovery.

Stated plainly, so it can be checked.

Properties of the systems we build, written as specifications rather than assurances.

Data location

Client-controlled infrastructure.

Access

Role-based. Permissions are explicit and reviewable.

History

An append-only record of changes and actions.

Agents

Bounded permissions, approval gates, a full action log, and every action reversible.

Network

Outbound access denied by default.

Failure

Offline-capable nodes and deterministic recovery.

Stated plainly, so it can be checked.
